

BUSINESS SALES PERFORMANCE REPORT

Prepared by: NEETHU O S

Date: June 2026

Reporting Period: December 2010

Data Source: online\_retail\_cleaned.csv

1. Executive Summary

This report provides a data-driven analysis of global sales performance during December 2010. The objective is to identify primary revenue drivers, evaluate customer purchasing behavior, assess international market distributions, and provide strategic recommendations to optimize future growth. Over the reporting period, the business generated **\$694,817.18** in total revenue across **1,352 unique orders**, demonstrating solid core transactional volume heavily anchored by repeat buyers and a dominant domestic market.

2. Key Performance Indicators (KPIs)

The following macro-metrics establish the baseline health of the business during the active period:

| Metric                    | Value         | Business Context & Interpretation                                                  |
|---------------------------|---------------|------------------------------------------------------------------------------------|
| Total Revenue             | \$694,817.18  | Aggregate gross revenue generated across all processed invoices.                   |
| Total Units Sold          | 308,027 units | Gross inventory volume moved through the fulfillment pipeline.                     |
| Unique Customers          | 832           | Total number of distinct buying accounts (excluding unrecorded transactions).      |
| Average Order Value (AOV) | \$513.92      | Gross revenue divided by unique invoices, indicating strong average basket values. |

3. Core Insights & Technical Analysis

A. Temporal Revenue Performance

An evaluation of daily transaction flows reveals highly variable purchasing behaviors throughout the month:

- **The December 7th Peak:** A major single-day surge occurred on December 7th, capturing a record **\$99,553.85** in a single day. This indicates a high-velocity event, likely triggered by a major B2B wholesale re-order or a highly successful marketing promotion.
- **Mid-Month Deceleration:** Following the initial week, sales stabilized between \$30K and \$50K daily, before a sharp decline to \$18,431.05 on December 17th as holiday shipping deadlines approached.

## B. Product Performance Hierarchy

Analyzing the top 10 products by gross financial yield indicates that revenue is driven by high-margin giftware and fundamental platform service fees:

1. **REGENCY CAKESTAND 3 TIER:** The undisputed top commercial product, generating **\$23,555.72**.
2. **DOTCOM POSTAGE:** Accounted for **\$17,094.69**, reflecting substantial baseline logistical costs passed to consumers.
3. **AMAZON FEE:** Represented an administrative cost/revenue column of **\$13,541.33**.
4. **WHITE HANGING HEART T-LIGHT HOLDER:** Captured **\$10,372.71** as the top-performing low-cost decor volume asset.

## C. Geographic Distribution & Market Concentration Risk

A regional assessment highlights extreme geographic dependency:

- **United Kingdom Market Share:** The UK completely dominates the corporate portfolio, accounting for **91.8% (\$637,499.48)** of total revenue.
- **Secondary Frontier Expansion:** The remaining international footprints are small by comparison: Germany stands at **\$11,854.36 (1.7%)**, EIRE at **\$8,570.01 (1.2%)**, and France at **\$7,733.44 (1.1%)**. Combined, the non-UK markets capture less than 9% of financial inflow, posing a clear concentration risk.

## D. Behavioral Analysis: One-Time vs. Repeat Buyers

Customer loyalty metrics indicate that retention is the single highest lever for expanding profitability:

- **The Retention Leverage:** While only **27.8% (231 accounts)** of the customer database are classified as repeat buyers, they generated a disproportionate **43.3% (\$301,144.75)** of total revenue.
- **LTV Reality:** A returning customer yields significantly higher lifetime value (LTV) and a lower customer acquisition cost (CAC) compared to cold-converting a one-time buyer.

#### 4. Strategic Business Recommendations

Based on the quantitative insights derived from the dataset, the business should deploy the following three-pronged operational strategy:

**1. Launch a Post-Purchase Retention Funnel** Given that repeat buyers generate 43.3% of revenue despite making up only 27.8% of the customer base, the business must prioritize retention over acquisition. Implement an automated email marketing sequence that triggers 14 days after a consumer's first purchase, offering a personalized discount code alongside complementary catalog items (e.g., cross-selling kitchenware bundles to past buyers of the *Regency Cakestand*).

**2. Diversify Geographic Concentration Risk** Relying on the UK for nearly 92% of sales exposes the infrastructure to localized economic fluctuations. The business should divert 15% of the upcoming digital ad budget to run targeted campaigns in **Germany** and **France**—our two strongest non-domestic footholds—capitalizing on pre-existing product demand to systematically build regional revenue buffers.

**3. Optimize High-Impact Product Positioning** High-margin ornamental pieces like the *Regency Cakestand* and the *White Hanging Heart T-Light Holder* should be prominently featured on the digital storefront's home page and checkout sidebars as "frequently bought together" suggestions. Additionally, look into logistics structures to streamline the high shipping fees denoted by *Dotcom Postage* to prevent cart abandonment.
